

LLRF Meeting

Dominik Konrad Rybka

16th October 2003

- Dominik Rybka:
 - FPGA logic layer radiation tests.
 - Radiation experiments on other electronic components placed on FPGA board (SDRAM memory, PROM memory, etc).
 - Developing shielding for electronics components for TESLA experiment.
 - Building dosimeter system for neutron and gamma radiation using optical fibre and LED diodes, in cooperation with Bhaskar Mukherjee.

- Arkadiusz Kalicki:
 - Irradiation tests of CCD and CMOS cameras:
 - * online monitoring of dead and hot pixels.
 - * lifetime of cameras.
 - * differences between neutron and gamma radiation influences.
 - Support for other radiation experiments.
